Sector: E-Health, Medical Technology

Fact Sheet

Business model

VisionHealth develops and distributes the digital health application Kata®, which uses artificial intelligence and computer animation to help respiratory patients inhale correctly.

Financing

VisionHealth GmbH is financially supported by various investors. In addition, AOK Bayern and VisionHealth GmbH have entered into a partnership to grant free use of Kata® to those with statutory health insurance.

What is Kata®?

Kata® was developed for the treatment of chronic respiratory diseases and enables more effective use of inhalers. It shows users how to inhale correctly in a simple and understandable way. The health app reminds its users to inhale and assesses whether the individual steps of the inhalation process have been completed in such a way that the active ingredient is delivered to the lungs in the best possible way. In addition, the inhalation assistant Kata® is CE marked.

Data & Security

A high level of data protection for the Kata® app is very important to us! It complies with the guidelines of the DSGVO and the DiGAV. The transfer of data to third parties is excluded and users' data will not be used for advertising purposes.

Secure access

- Access only via personal login data with high password requirements
- Protection of the systems by a firewall

Secure data transmission

- Use of cryptographic methods for transport encryption

Data hosting in Germany

- Use of the cloud provider Exoscale
- Server locations exclusively in Germany

Data backup concept

- Hourly backups and internal authorization concept

Security

- Internally conducted penetration tests
- Internally performed vulnerability scans
